

Prescriber APIs

Post Prescription

Post the details of a prescription as prescribed for the user. Supply the details of the assessment which the user might have have to be prescribed.

```
curl -X 'POST' \
  'http://api.rtm.sprypt.com/v1/prescribe' \
  -H 'accept: application/json' \
  -H 'Content-Type: application/json' \
  -u rtm_test_4eC39HqLyjWDarjtT1zdp7dc \
  -d '{
    "prescriber_id": 99,
    "user_id": 10,
    "assessments": [
      {
        "assessment_id": 12,
        "name": "Squats",
        "prescribed_count": 10,
        "start_day": "20220101",
        "end_day": "20220110"
      },
      {
        "assessment_id": 10,
        "name": "R Shoulder flexion",
        "prescribed_time": 30,
        "start_day": "20220101",
        "end_day": "20220110"
      }
    ]
  }'
```

Here is the sample response

```
{
  "prescriber_id": "wqwe09d"
}
```

Get Prescription Information

Get the details of a prescription as prescribed for the user. Supply the unique identifier of the prescription, which you might have received in a webhook.

```
curl -X 'GET' \
  'https://api.rtm.sprypt.com/v1/100' \
  -H 'accept: application/json' \
  -u rtm_test_4eC39HqLyjWDarjtT1zdp7dc
```

Here is the sample response

```
{
  "user_id": 36,
  "prescription_id": 9,
  "assessments": [
    "Squats",
    "L Cervical Extension",
    "R Shoulder flexion"
  ]
}
```
