

User APIs

This is an object representing the user's artifacts. You can retrieve it to see the user's session, assessments and even adherence.

Adherence Report

Retrieves the adherence details of a session as taken by the user. Supply the unique identifier of the event, which you might have received in a webhook.

```
curl -X 'GET' \
  'https://api.rtm.sprypt.com/v1/adherence/100/7' \
  -H 'accept: application/json'
